BONAFIDE CERTIFICATE

This is to Certify that this project titled **“QUADRANTS DYNAMIC HISTOGRAM EQUALIZATION FOR CONTRAST ENHANCEMENT”** is the bonafide work of **Manga Rohith Kumar (Y20IT072), Modela Ganesh Kumar (Y20IT076), Nukathoti Arun Babu (L21IT137)** who have carried out the work under my supervision, and submitted in partial fulfillment for the award of the degree IT461-Project Work, B.Tech. in Information Technology During the year 2023-2024.

Smt. K.CHANDANA, M.Tech.

Assistant Professor

Information Technology

Dr. A. SRIKRISHNA, M.Tech., Ph.D.

Prof. & HOD

Information Technology

ACNOWLEDGEMENT

The successful completion of any task would be incomplete without a proper suggestion, guidance and environment. Combination of these three factors acts like backbone to our project “QUADRANTS DYNAMIC HISTOGRAM EQUALIZATION FOR CONTRAST ENHANCEMENT”.

We would like to express our gratitude to the Management of R.V.R & J.C COLLEGE OF ENGINEERING for providing us with a pleasant environment and excellent lab facility.

We regard our sincere thanks to our Principal, **Dr.K.Srinivas** for providing support and stimulating environment.

We are greatly indebted to **Dr. A. Srikrishna**, Professor and Head of the Department Information Technology, for her valuable suggestion during the course period.

We would like to express our special thanks of gratitude to our guide **Smt. K.CHANDANA** who helped us in doing the project successfully.

We would like to thank out Project in-charge **Smt. K.Chandana** who gave us the opportunity to do this work.

ABSTRACT

The problem at hand concerns the enhancement of digital images captured by consumer electronic devices, where existing methods often fall short in addressing inherent limitations. In response, a novel approach known as Quadrant Dynamic Histogram Equalization (QDHE) is proposed. QDHE revolutionizes traditional histogram equalization by strategically dividing the image histogram into quadrants and employing median-based sub-histograms. These sub-histograms allow for more localized adjustments, enhancing the adaptability of the technique across different image regions. Moreover, QDHE incorporates intensity clipping based on occurrence mean, effectively mitigating issues such as intensity saturation and noise amplification commonly encountered in conventional methods. By dynamically assigning a new intensity range and performing individual sub-histogram equalization, QDHE aims to outperform current techniques in terms of image enhancement and preservation of intricate details. Notably, the study highlights the efficacy of QDHE in addressing challenges associated with images captured in low-light conditions, which are prevalent in devices such as smartphone cameras. This innovative approach not only promises to improve the overall quality of digital images but also offers practical solutions for enhancing user experience in various consumer electronic devices..

LIST OF CONTENTS

ACKNOWLEDGMENT	i
ABSTRACT	ii
LIST OF FIGURES	v
LIST OF CONTENTS	vi
CHAPTER 1 INTRODUCTION	1
1.1 Applications	2
1.2 Literature Survey	2
1.3 Histogram Equalization	3
1.4 Drawbacks of HE	3
1.5 Objectives of present study	4
1.6 Scope of the present study	4
CHAPTER 2 VARIATIONS OF HE	
2.1 Histogram Equalization(HE)	5
2.1.1 Introduction	5
2.1.2 Methodology	5
2.1.3 Results	6
2.2 Mean Brightness Preserving Bi-HE(MBPHE)	
2.2.1 Introduction	7
2.2.2 Methodology	7
2.2.3 Results	8
2.3 Recursive Mean -Separate HE(RMSHE)	
2.3.1 Introduction	9
2.3.2 Methodology	9
2.3.3 Results	10
2.4 Bi Histogram Plateau Limit	
2.4.1 Introduction	11
2.4.2 Methodology	12

	2.4.3 Results	12
	2.5 Dynamic Histogram Equalization(DHE)	
	2.5.1 Introduction	13
	2.5.2 Methodology	14
	2.5.3 Results	14
	2.6 Brightness Preserving Dynamic HE(BPDHE)	
	2.6.1 Introduction	15
	2.6.2 Methodology	15
	2.6.3 Results	16
	2.7 Summary	17
CHAPTER 3	QUADRANTS DYNAMIC HISTOGRAM EQUALIZATION	
	3.1 Introduction	18
	3.2 Methodology	
	3.2.1 Histogram Partitioning	19
	3.2.2 Clipping Process	20
	3.2.3 New Gray Level Allocation	21
	3.2.4 Histogram Equalization	23
	3.3 Results and Discussions	24
	3.3.1 Proposed QDHE Performance	26
	3.3.2 Final Output	27
	3.4 Summary	28
CHAPTER 4	QUALITATIVE AND QUANTITATIVE ANALYSIS	
	4.1 Experiment Results	29
CHAPTER 5	CONCLUSION	31
	References	32

LIST OF FIGURES

S.NO.	DESCRIPTION	PAGE NO.
2.1	HE Results	6
2.2	MBPHE Results	8
2.3	RMSHE Results	10
2.4	Bi Histogram Equalization Plateau Limit Results	12
2.5	Dynamic Histogram Equalization Results	14
2.6	BPDHE Results	16
3.2	a) Histogram Partitioning	20
	b) Before Clipping	21
	c) After Clipping	21
	d) New gray level allocation	22
3.3	Results and Discussion	25
3.3.2	Final Output Results	26
